

Job Search & Career Fit Analysis

Prepared for Bathiraj M | Krishnagiri district, Tamil Nadu | July 2026

1. Professional Profile

Current Role: Third-year B.Tech student, Artificial Intelligence & Data Science, CMS College of Engineering (2024-2028 batch, 82% current standing). Also runs a nursery (plant) business alongside studies.

Experience: No formal work experience yet - background is academic plus hands-on project work: NutriScope (Indian food nutrition tracker), a Personal Environmental Health Analyzer dashboard for Krishnagiri district, and a personal portfolio site, all built as single-file HTML/Tailwind apps.

Key Skills & Technologies: Python (beginner level per resume), AI fundamentals, Data Structures & Algorithms. Independently developed strong frontend skills (HTML, Tailwind CSS, Chart.js) not yet reflected on the resume.

Industry / Domain Expertise: AI & Data Science (academic), practical web development, and plant nursery / agribusiness.

Current Company Type: N/A (student). Most recent resume review targeted a Graduate Software Engineer role at Springgreen, which surfaced two gaps: (1) that role wants full-stack skills (React.js, Node.js, TypeScript, MongoDB) vs. a currently frontend-leaning profile, and (2) a 2028 graduation date may fall outside typical eligibility windows for roles hiring "graduates" now.

Location: Krishnagiri district, Tamil Nadu, India.

Notable Achievements: 1st Prize, Zonal Level - Naan Mudhalvan Employability Hackathon (SM Groups / TNSDC). Symposium participant at "Power AI" (Indra Ganesh College of Engineering). Active LinkedIn creator (@bathiraj-m-ai) running the "ABTalks" AI education content series.

2. Job Search Criteria

Target Roles: Internships (student-friendly) - appropriate given third-year standing.

Work Arrangement: Remote

Location Preference: Tamil Nadu only

Best-Fit Note: Given a beginner-level Python listing and no web dev projects yet on the resume, AI/Data Science internships open to early learners, or web development internships (leveraging existing Tailwind/HTML project work), are the strongest realistic matches - stronger than roles expecting production ML experience.

3. Job Discovery Results (via ZipRecruiter)

Important limitation: The ZipRecruiter connector only returns listings from the United States and Canada. It cannot surface Tamil Nadu-specific opportunities, so the results below do not actually satisfy the "Tamil Nadu only" requirement. They are included for reference only, and nearly all would require US/Canada work authorization even where marked "remote."

Company	Role	Location	Posted	Match	Why It Fits
Clinical Ink	AI & Innovation Intern	Remote (US)	24d ago	Medium	AI-focused, entry-friendly; no confirmed direct skill match

Company	Role	Location	Posted	Match	Why It Fits
Nirmata	AI Software Engineer Intern	San Jose, CA (remote optional)	13d ago	Medium	AI + software engineering blend fits AI/DS coursework
CPI Card Group	AI Automation & Process Analyst Intern	Littleton, CO (remote)	9d ago	Low-Medium	Process/automation angle, less aligned to dev skills
MarketBridge	AI Context & Ontology Development Intern	Remote (US)	11d ago	Medium	Ontology/AI data work aligns with AI & DS degree
OfferUp	Software Engineering Intern (Summer 2026)	Bellevue, WA (hybrid)	27d ago	Low	Strong company, but hybrid/onsite-leaning, not remote-first

Reality Check

None of these listings are realistically accessible for a Tamil Nadu-based student seeking fully remote, India-region work - US internships almost always require US work authorization, even the ones labeled "remote."

Recommendations

- Search Indeed or Dice with an explicit India / Tamil Nadu location filter - likely better regional coverage than ZipRecruiter.
- For Tamil Nadu-relevant internships, platforms like Internshala, LinkedIn (where an active presence already exists), and Naukri tend to have far stronger local listings than US-centric job boards.
- Consider adding web development projects (HTML/Tailwind/Chart.js work already built) explicitly to the resume skills section, since this is a genuine strength not currently reflected.
